SIM Management Platform

for MNO's, Enterprise & IoT
service providers

Accelerate IoT growth and digital transformation with
a single easy-to-use online platform.

The Game
is Changing

Today's world is rapidly shifting towards digital, driving the telecom industry to digitize its services, offerings, business processes and models. In the last 5 years, the telecom industry has been facing a very high demand for SIM management from business customers.

Now, mobile service providers are looking for ways to expand their offerings on IoT and SIM management solutions.

However, offering fast and reliable SIM management solutions could have some challenges and difficulties.

Introducing SIMcontrol:
A Powerful Online SIM Management
Platform to Manage Large Numbers of IoT, M2M
and Enterprise SIMs.

SIM CONTROL

Enterprise SIM Management platforms can be complicated and expensive, for both mobile operators and their customers. Selling and implementing overly-complex solutions is hard. With comprehensive capabilities, SIMcontrol offers an easy and fast SIM management platform.

SIMcontrol is a proven, easy to deploy B2B service perfectly suited for companies deploying large numbers of IoT, M2M and other connected devices.

Typical customer growth segments include mobile workforce, smart metering, vehicle tracking, utilities, security technology, government, smart agriculture as well as several SME markets.

Our Platform Features

We offer an advanced online SIM management platform for managing IoT data connectivity and put the power into your enterprise customers' hands.

An own-branded self-service online platform, integrated with your BSS, cloud hosted and fully maintained by Flickswitch

An online administration platform to provide easy Tier 1 customer support

A single wallet capability integrated with your BSS. Offer customers pre-funded or credit accounts

Regular software updates ensures future-ready enhancements are retained in the customized solution

We provide launch and ongoing Go-To-Market support including knowledge sharing, sales experience, training and marketing collateral as well.
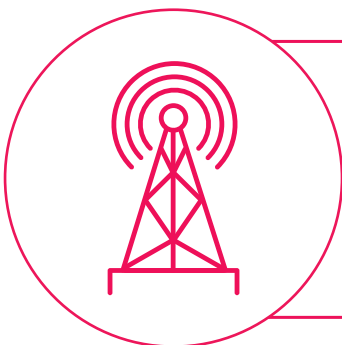

Features of SIMcontrol

- Self-service platform with easy to use UI
- Real time monitoring with SIM level spend control against single wallet
- Rule based top-up automation based on usage or schedule
- SIM level balance management with automated bundle provisioning
- Organisation level bundles for Pooled Data with SIM level quota management

Benefits
For Customers

- Individual SIM quota management
- Self-help platform for managing data pools and SIM quotas
- Control what sites or networks employees may access using the company's mobile data.

For Connectivity Service Providers

- Own-branded SaaS based enterprise SIM Management platform
- "Build Your Own" packages for customers on existing product catalogue
- Automation & orchestration on top of existing Telco infrastructure
- Real time credit control to manage customer spend & risk
- Customer self-service to manage fulfilment & troubleshooting
- Increase your revenue and ARPU beyond data margins

Advanced Features

Pooled Data:
A Powerful Approach to Mobile
Service Providers Biggest Challenge

At Flickswitch, we know many of mobile service providers' biggest challenges can be improved or solved through pooled data, because we see it every day. Our platform SIMcontrol offers powerful Pooled Data functionality. It is quick & easy to deploy on either shared or private APN's.

Enterprise customers are using new technologies to adapt their business models and remain competitive within their relevant markets. Pooled Data services helps companies with digitalisation strategies and ensures mobile networks remain at the forefront of changing enterprise connectivity needs.
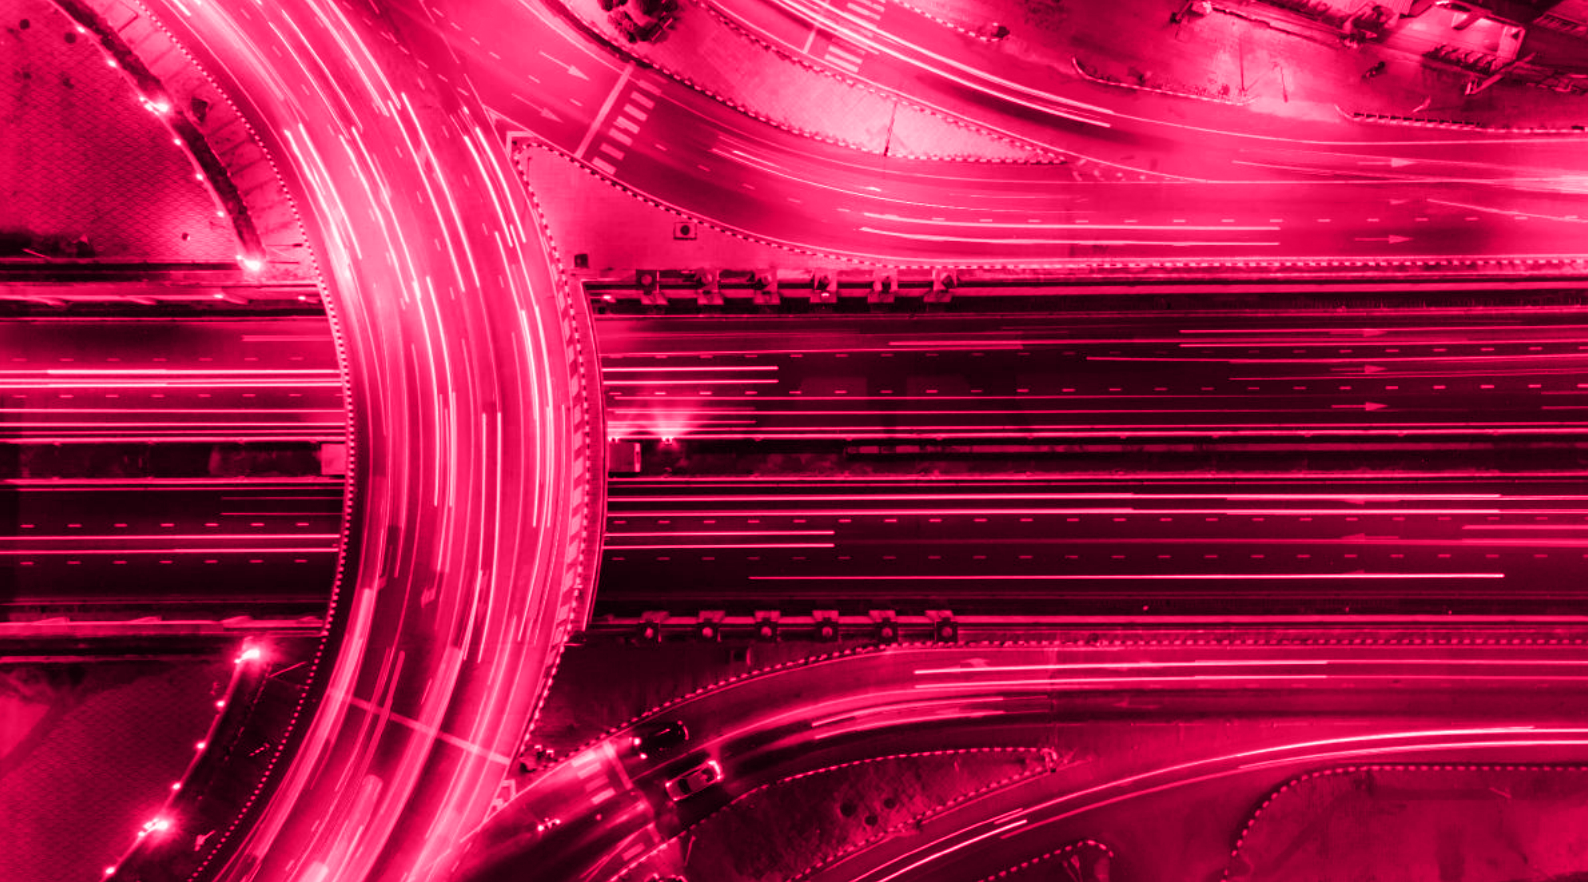

Managed APN:
The new-generation secure
mobile data access solution

Enterprise customers are demanding more control, security and networking capabilities on their corporate networks. SIMcontrol makes it easy for mobile network operators to offer fully managed private APN services with a range of advanced features.

Allow your mobile devices to only access specific destinations or reach your corporate private network securely. Make fire-walling and data control simple and easy.

About us

Flickswitch has for over 10 years assisted mobile networks and enterprises to deploy connected devices at scale. Flickswitch manages data SIMs for hundreds of companies ranging from M2M, IoT, Mobile Workforce, Fintech & POS, Security, Agritech, Retail and many other mobile data applications.
